

Effect Editor

The Effect Editor in BEYOND is continuously available and is found on the right side of the BEYOND window. The Effect Editor window shown below, along with an explanation of the main features.

The Effect Editor is continuously available, and can be found on the right side of the BEYOND window, below the Preview window and on the right side of the Live Control tab

Since the Effect Editor is a "shared" resource, this text tells you what the Effect Editor is currently working on
The Effect Editor "E" icon can also be seen in cues

To add a new effect, just click on the Add button

Alternatively, you can double-click one of the Favorite Effects in the library under the Effect Editor

Adding an effect and adjusting parameters

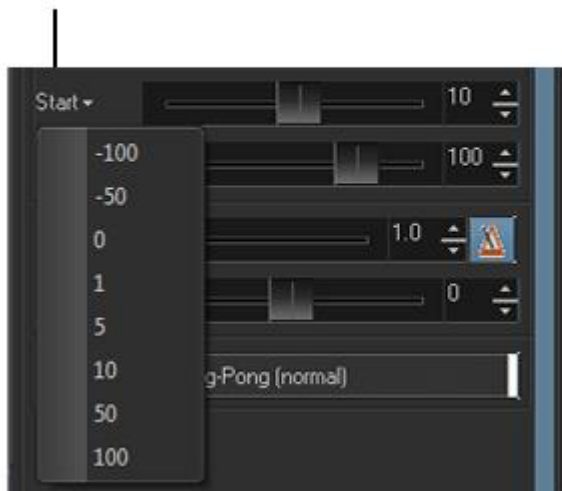

Once you have added one or more effects, the parameters for each effect can be found in the lower portion of the editor window

Placing your mouse in the blue area to the right allows you to scroll the contents up and down

(this works just like the panels in 3D Studio MAX)

Quickly accessing often-used values

For most parameters, you can quickly access the most-used values by clicking on the down-pointing arrow. After that, simply click on the value you want.

Actions can be based on the beat of the music, or based on time

Many Effects have the capability of performing an action based on the Beat of the music, or based on Time.

You can change between Beats and Time by clicking on the icon to toggle it.

Types of Effects

BEYOND offers three different types of effects:

- Oscillating Effects (typically used to perform functions to the beat of the music, such as zooming, fading, rotating, etc.)
- Key Effects (these are time-based effects which actually each of their own timeline, so they can do more complex actions)
- Color Effects

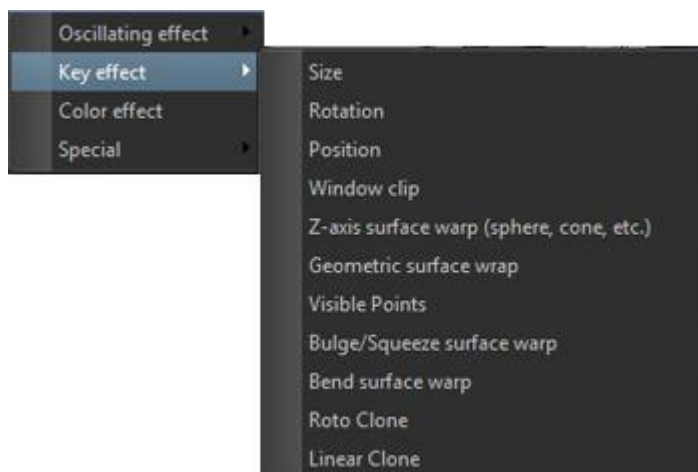

Oscillating Effects

The list of Oscillating Effects can be seen below.

Key Effects

The list of Key-Effects can be seen below

Color Effects

Although BEYOND only has one Color Effect menu, the single Color Effect has many options which make

it very versatile.

The screenshot shows the Effect Editor interface with a color gradient bar at the top. Below the bar are several control panels: 'Options: By Points, Color Control, Gradient', 'Repeats' (set to 1.0), 'Speed' (set to 0), 'Time Shift (%)' (set to 0.0), 'Alpha Blend' (set to 100.0), 'Action Start (%)' (set to 0.0), 'Action End (%)' (set to 100.0), and a 'Speed option' dropdown set to 'Linear (continuous)'.

Annotations with lines pointing to the interface:

- Double-click on a color chip to change the color, or double-click in between chips to add a color
- There are many options about how to apply the color effect -- i.e. by points, by radius, by axis, etc.
- This controls how many times the color sequence will be repeated
- This controls the speed so color cycling can be performed
- This allows you to control the blend between the original colors and Effect colors
- These two control the start and end of the action. Depending on the Options above, it could mean the starting and ending point, starting and ending radius, etc.
- The effect can take place continuously, ping-pong, random, accelerate/decelerate, etc.
