

LC4D

Getting started

Lasershow Converter 4D works with modern versions of MAXON's Cinema 4D computer graphics program. It lets you turn 3D computer graphics into laser graphics, quickly and easily.

- [Introduction](#)
- [Installing Lasershow Converter 4D](#)
- [What's new](#)

The Lasershow Converter 4D system consists of two plug-ins for Cinema 4D: A Renderer and an Object Tag. Each plug-in is explained below:

Lasershow Converter 4D Renderer

The renderer turns Cinema 4D frames and scenes into laser-projectable frames and scenes. Here are step-by-step instructions on using the renderer:

- [Step 1: Selecting the renderer](#)
- [Step 2: Assigning Lasershow Converter 4D as the renderer](#)
- [Step 3: Rendering a frame](#)
- [Step 4: Rendering an animation](#)
- [Step 5: Viewing an animation](#)
- [Step 6: Summary](#)

Post-Render Effect

You will find several control sections on the main Lasershow Converter 4D post-render effect. These control groupings are:

- [Line Types](#) - Allows you to control how the objects are interpreted and output as laser lines.
- [Line Color](#) - Allows you to control how the color of the objects are used to control the color of the laser lines.
- [Filter settings](#) - Allows you to smooth out the beam path derived from a coarse object.
- [Laser Output, Preview Options and Save Functions](#) - Allows you to control the frame note that will be used for each frame, and whether or not you will see laser output projected while the scene is

being rendered.

- [LC4D Help](#) -Common information about the Lasershow Converter 4D and access to this help file.

Lasershow Converter 4D Object Tag

The object tag plug-in lets you adjust aspects of how Cinema 4D objects will be drawn by the renderer. Click one of the topics below for details.

- [Overview](#)
