# How to use The Pangolin Media Tracer

**Video description:** The Pangolin Media Tracer is a companion app in our BEYOND software available to Advanced and Ultimate users. It allows users to take in nearly any type of media, and create laser content from that media. This tool includes a bunch of user configurable options to get the best trace possible instead of just hoping the tracer gets it right.

It can be used for many purposes from laser mapping and laser augmentation of video, to creating clean client logos, and even using video media to produce beam content.

The Pangolin Media Tracer came out with the BEYOND 5.8 Release.

**Chapters:**

- 0:00 Introduction to the Pangolin Media Tracer
- 1:06 How to Open the PMT
- 1:29 PMT UI Overview
- 1:47 How to create your first trace
- 2:59 Types of importable Media
- 3:30 File Menu
- 4:15 Trace Panel
- 8:13 Point Spacing Panel
- 10:11 Special Features
- 11:54 Thank you for Watching
