

# Projector Settings

In our ecosystem, its important to set the projector settings in BEYOND and Quickshow to ensure your laser is running as good as it could. However, we understand sometimes it can be difficult to get these settings right especially if you are new!

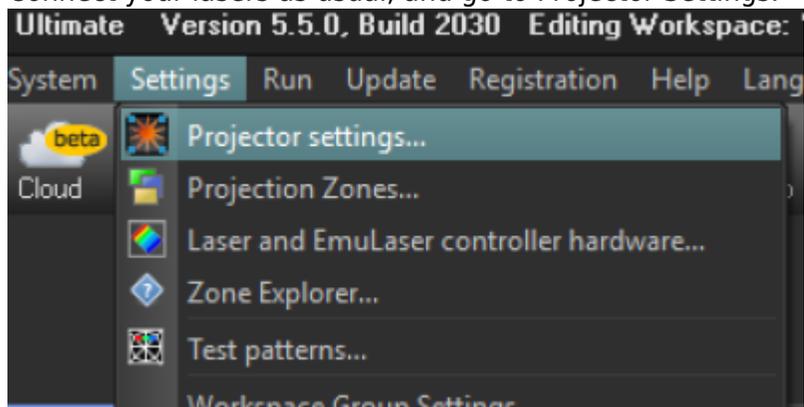

Below we provide some good projector settings files to load for your projectors, which will protect their longevity, allow them to operate at their best, and reveal colors you never knew existed!

These files should work great for all new lasers when mentioned in their model name. The only thing that does change is generally as lasers age their colors will shift a bit, so the color tune may not be perfect and may need some adjustment.

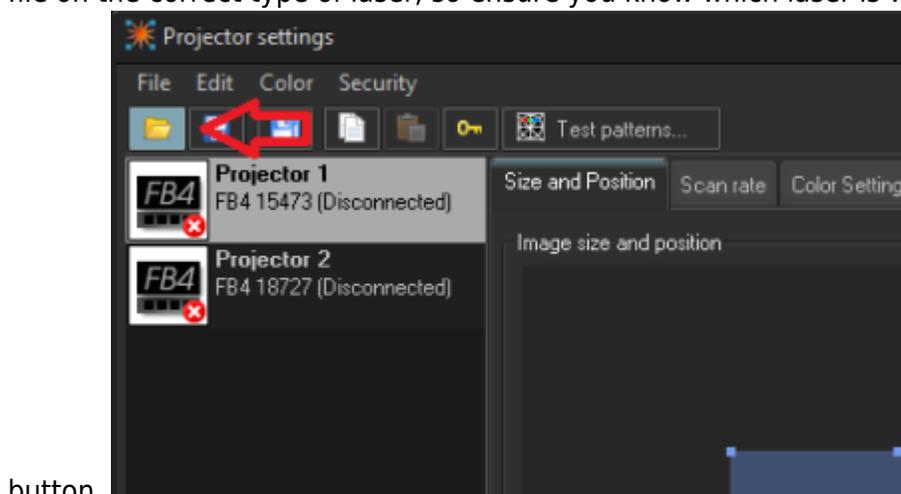

## How to use these files

To utilize these, download the files onto your computer.

Connect your lasers as usual, and go to Projector Settings.

Select the projector you want to upload the settings to, it's important to use the correct projector settings file on the correct type of laser, so ensure you know which laser is witch. Once selected, click the open

button.

Load the correct file.

Then once you press OK on the projector settings window, this install of beyond will remember these settings for this specific laser whenever you connect or disconnect it.

# Unity Lasers

## Unity Raw Series

**Raw 1.7 DMX**

**Raw 1.7 FB4**

**Raw 3 DMX/FB4**

**Raw 5 DMX/FB4**

**Raw 10 DMX/FB4**
