2025/09/16 20:00 1/2 Advanced Clock editor

Advanced Clock editor

To round out the set of advanced features, QuickShow also includes an **Advanced Clock editor** which can be used to create analog or digital clocks that can count up and down, and in horizontal or vertical orientation. The main window of the **Advanced Clock editor** is shown below, along with a view of the main controls.

As seen above, count-up or count-down clocks can easily be created, and may even include milliseconds if desired!
