QuickShow System requirements

The minimal recommended system requirements for QuickShow are

- PC Notebook or Desktop with quad-core processor such as Intel 10th gen i5, 2.5GHz or better
- 8Gb of RAM or more
- Intel graphics card HD 4000 or better
- Windows 10, 64 Bit or higher
- 5 Gb free disk space, SSD strongly recommended.
- free usb port in case of FB3/dongle
- 1Gbit Ethernet port or faster for FB4

QuickShow does not run on MAC OSX or ARM CPU based systems

FB3 cannot work on Parallels that runs on MAC OSX with a "M" series cpu

Big projects with multiple laser controllers will require a computer with higher specifications.
