

QuickShow System requirements

The minimal recommended system requirements for QuickShow are

- PC Notebook or Desktop with quad-core processor such as Intel 10th gen i5, 2.5GHz or better
- 8Gb of RAM or more
- Intel graphics card HD 4000 or better
- Windows 10, 64 Bit or higher
- 5 Gb free disk space, SSD strongly recommended.
- free usb port in case of FB3/dongle
- 1Gbit Ethernet port or faster for FB4

QuickShow does not run on MAC OSX or any other ARM CPU based systems

FB3 cannot work on Parallels that runs on MAC OSX with a "M" series cpu

Big projects with multiple laser controllers will require a computer with higher specifications.
